DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7 and 25-29, drawn to vector and host cell, classified in class 435, subclasses 320.1, 325, 243, and 410.
- II. Claims 8-11, 14-19, and 21-24, drawn to method for detecting inhibitory effect, classified in class 435, subclass 29.
- III. Claims 12-13 and 20, drawn to method for isolating a gene, classified in class 435, subclass 6.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and Groups II-III are related as product and processes of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product as claimed can be used in a materially different

process, as evidenced by the distinct inventions of Groups II-III.

Inventions of Groups II-III are biologically and functionally different and distinct from each other and thus one does not render the other obvious. The methods of Groups II-III comprise steps which are not required for or present in the methods of the other group: testing whether the cells obtained in which a test substance was introduced are alive (Group II) and isolating a gene introduced into the cells (Group III). The end result of the methods are different: detection of an inhibitory effect (Group II) and isolation of a gene (Group III). Thus, the operation, function and effects of these different methods are different and distinct from each other. Therefore, the inventions of these different, distinct groups are capable of supporting separate patents.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Art Unit: 1636

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
